## **PRESS RELEASE**

### **TPR Executives to Speak on Technologies and Trends**

19 January 2007: Rochester, NY: Torrey Pines Research (TPR) announces that President J. Randolph Sanders and Senior Vice President Peter Mason will be addressing “The Future of High Speed Digital Printing Technologies” at IMI’s **10<sup>th</sup> Annual Toner & Imaging Chemicals Conference** being held **February 7-9, 2007** at the Radisson Orlando Resort – Celebration in Kissimmee, Florida. They will be leading IMI’s **EP Technology – The Bright Future Seminar** on February 5-6, 2007 at the same location.

Mr. Sanders’ and Mr. Mason’s conference presentation will address the major topics of the Major Technologies: Dry Toner, Liquid Toner & Ink Jet; Current Products By Technology; Suppliers Strategies By Technology; and Future Trends.

The Conference features presentations from leading companies and industry experts. Key topics being covered include the potential impact of REACH on toner and raw material suppliers; how foreign competition may affect toner and raw material suppliers; the future for chemical toners; styrene acrylic and polyester resins; environmentally friendly polymers; how to achieve optimum pigment dispersion; internal vs. external charge agents; and the latest trends in toner production and test equipment, all key elements shaping the future of toner and imaging raw materials.

Torrey Pines Research is the leading independent product development, product engineering, and technology consulting Company since 1986. Headquartered in Carlsbad, CA the company provides advanced development services to companies in printing technology, medical device and diagnostics development, and industrial / consumer product design with turnkey manufacturing capabilities.
